

git:

create one main branch then create sub branches from that main branch with your name  
ex:khali-python-test  
copy this code.and write code in python language

python:

1.Given an array of ints length 6, return an array with the elements "rotated left" by given count.

example

```
arr=[1,2,3,4,5,6]
rotate_left([1,2,3,4,5,6],2) → [3,4,5,6,1,2]
rotate_left([1,2,3,4,5,6],4) → [5,6,1,2,3,4]
```

```
def rotate_left(arr,len):
    pass
```

2.1.Given an array of ints length 6, return an array with the elements "rotated right" by given count.

```
arr=[1,2,3,4,5,6]
rotate_right([1,2,3,4,5,6],2) → [5,6,1,2,3,4]
rotate_right([1,2,3,4,5,6],4) → [3,4,5,6,1,2]
```

```
def rotate_right(arr,len):
    pass
```

3.Given an array of ints, return array of max 3 elements in the array.

(don't use sort builtin function)

```
arr=[8,0,5,15,2,13,7,10]
output:
max array=[15,13,10]
```

```
def max_3(arr):
    pass
```
